- Current research

Purpose

To determine CD24 expression in myogenic differentiation and analyze overexpression of the CD24 gene in myoblasts will affect differentiation and growth rates.

Hypothesis

CD24 will be expressed in all stages of myogenic differentiation and recombinant DNA will be a useful tool to study its overall function in muscle regeneration:

- 1) CD24 will be expressed at all levels of myogenic lineage
- 3) CD24 overexpression will increase differentiation rates in myoblasts

Research Design

CD24 Detection

CD24 Functional Analysis

In vivo modeling

Clinical implants

CD24 Detection

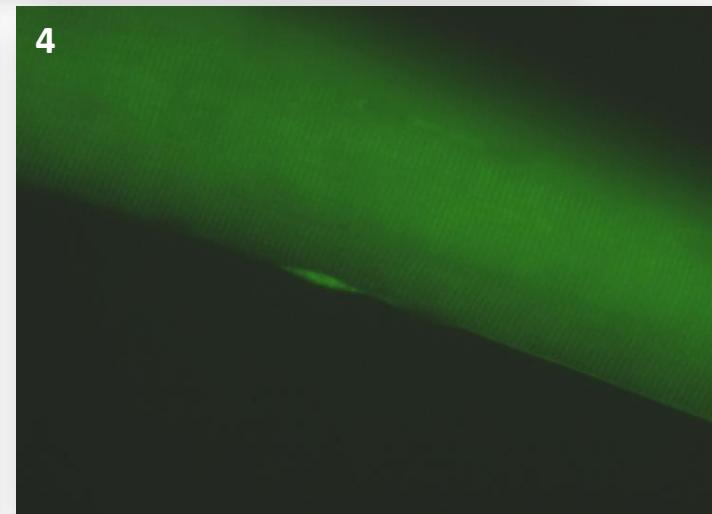

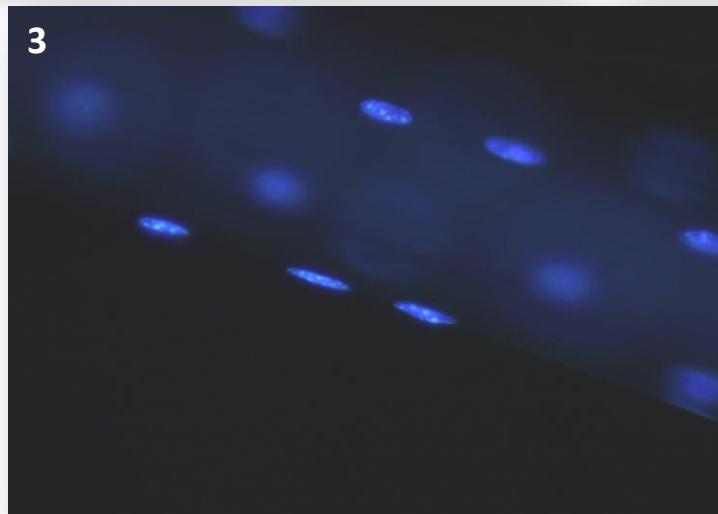

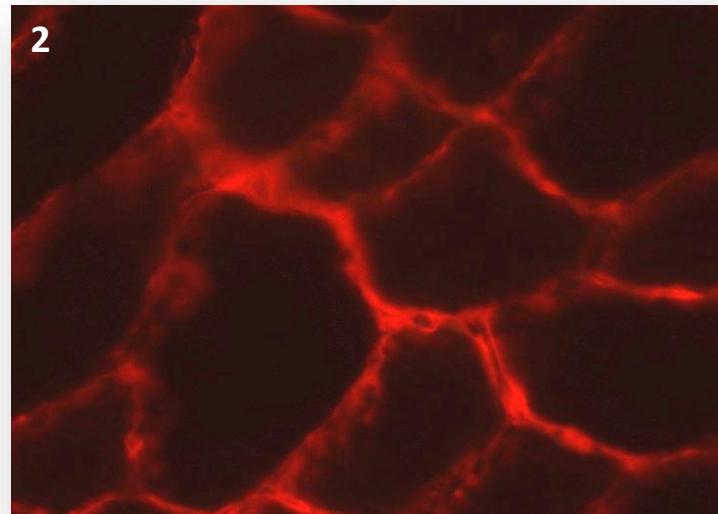

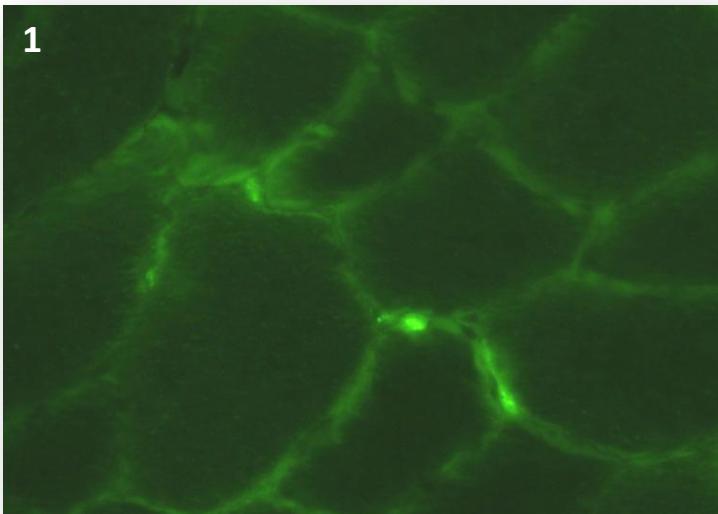

Quiescent Satellite Cell Staining

- Primary antibody staining
 - Tibialis Anterior
 - CD24 & Laminin
 - Pax7 & MyoD

Magnetic Cell Separation Columns

- Isolation
 - Negative markers: anti-CD45, CD31, Sca-1 antibodies
 - Positive markers: Integrin7, CD24
- Detection
 - MyoD & CD24

CD24 Detection

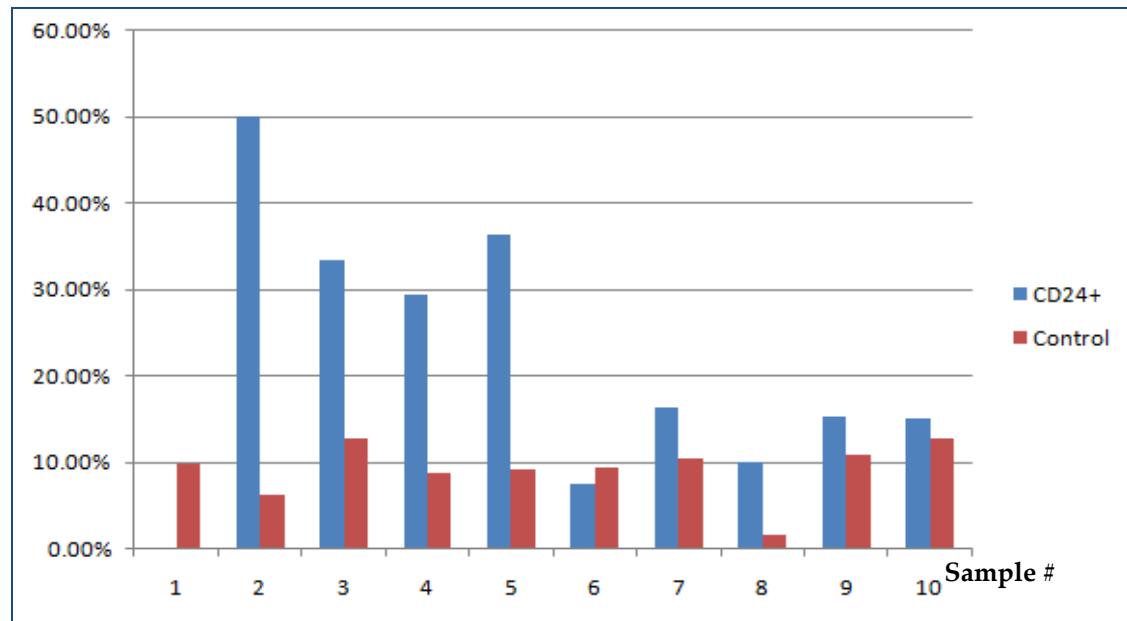

CD24 Overexpression

Vector

- Recombinant DNA
 - Ligation
 - Transfection
 - Infection

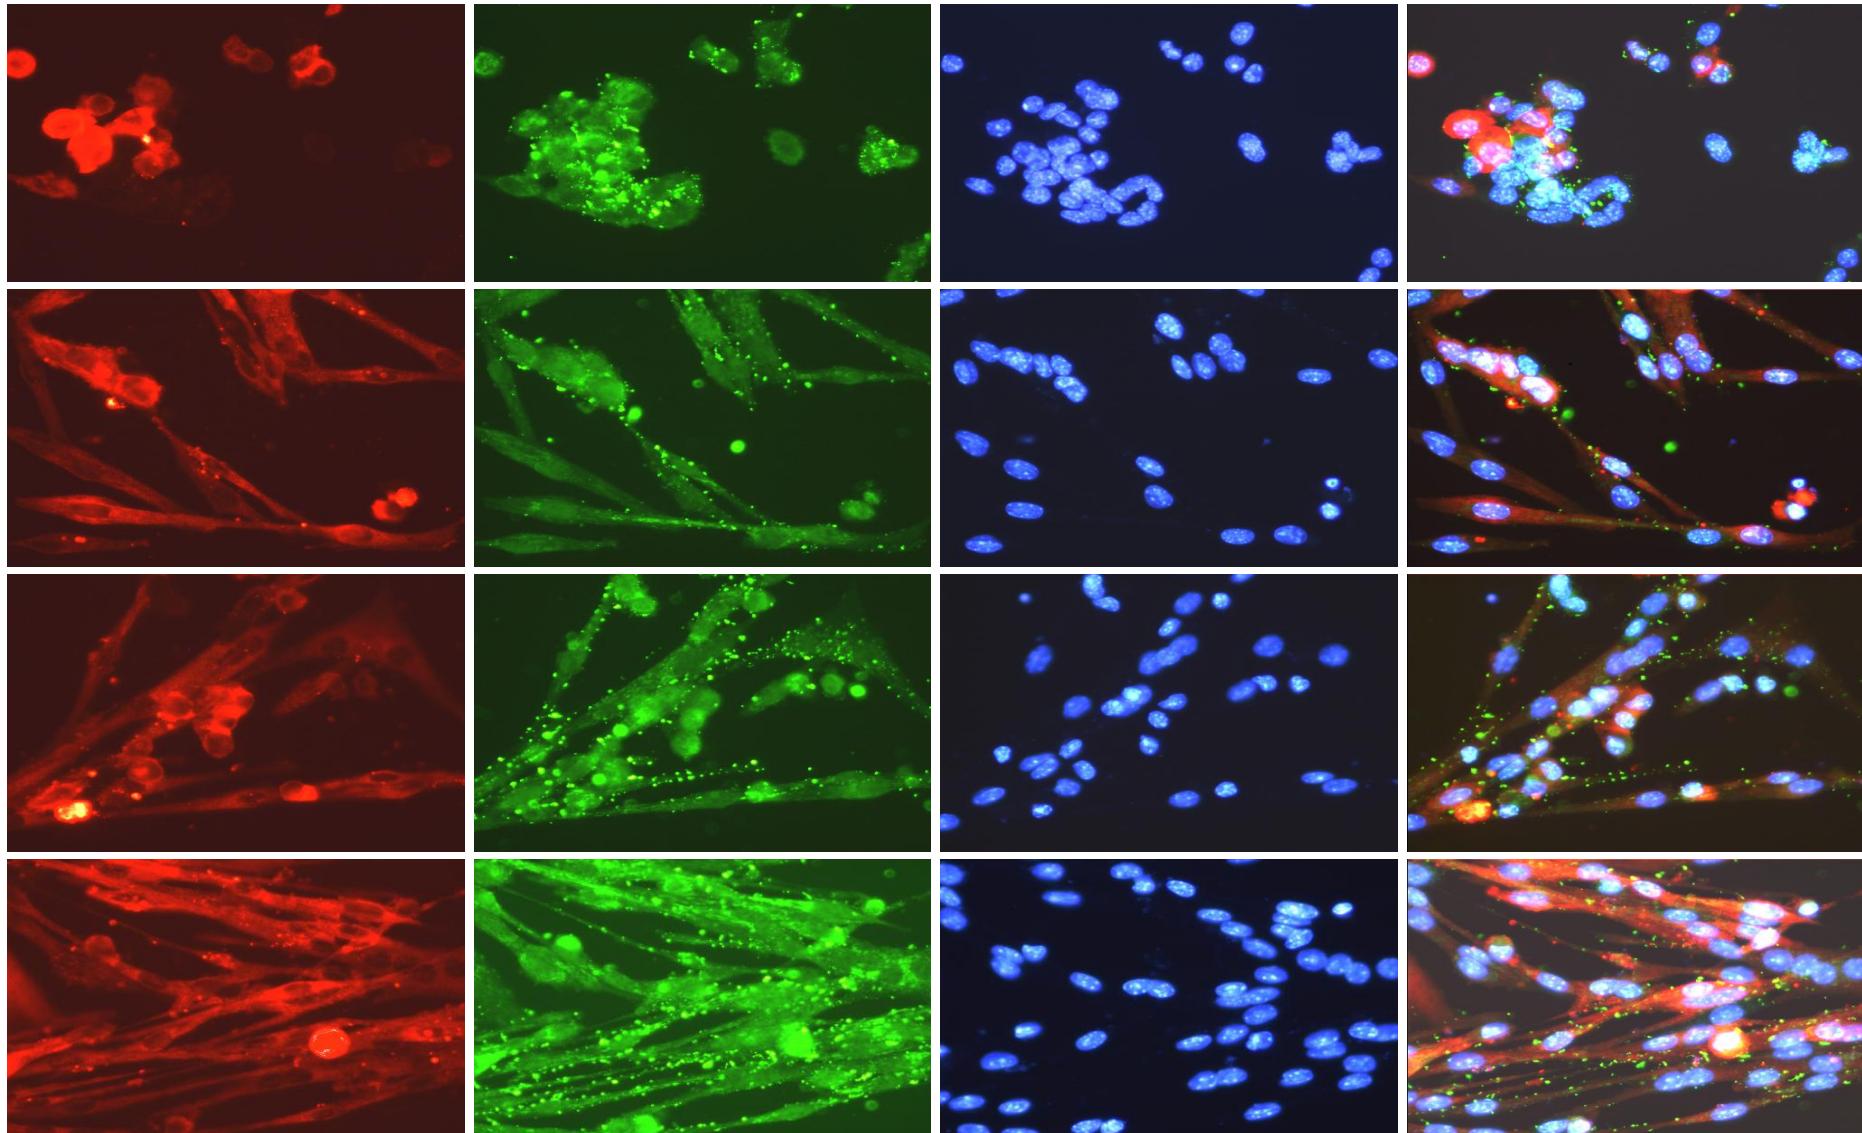

Analysis

- Incubation
 - Day 0,2,4,6,8
- Detection
 - CD24 & MHC

	Sample1	Sample 2	Sample 3	Sample 4	Sample 5	Sample 6	Sample 7	Sample 8	Sample 9	Sample 10
CD24										
MHC+ & CD24+	0	4	6	5	4	3	7	1	4	3
CD24+	2	8	18	17	11	40	43	10	26	20
pMXs	Sample1	Sample 2	Sample 3	Sample 4	Sample 5	Sample 6	Sample 7	Sample 8	Sample 9	Sample 10
MHC+	8	5	10	6	3	4	3	1	4	10
CT	81	81	78	57	34	43	32	63	37	78

CD24 Overexpression

Conclusion

Detection

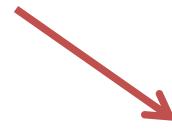

- **Quiescent**
-Negative
- **Activated**
-Positive

CD24	Day 0 Ave.	Day 2 Ave.	Day 6 Ave.	Day 8. Ave
(MHC+ & CD24+)/CD24+	21.33%	67.21%	86.13	90.89%
pMXs	Sample1	Sample 2	Sample 3	Sample 4
MHC+/CT	9.21%	43.76%	64.05	77.69%
P =	0.0256	0.00653	0.00536	0.00191

Overexpression

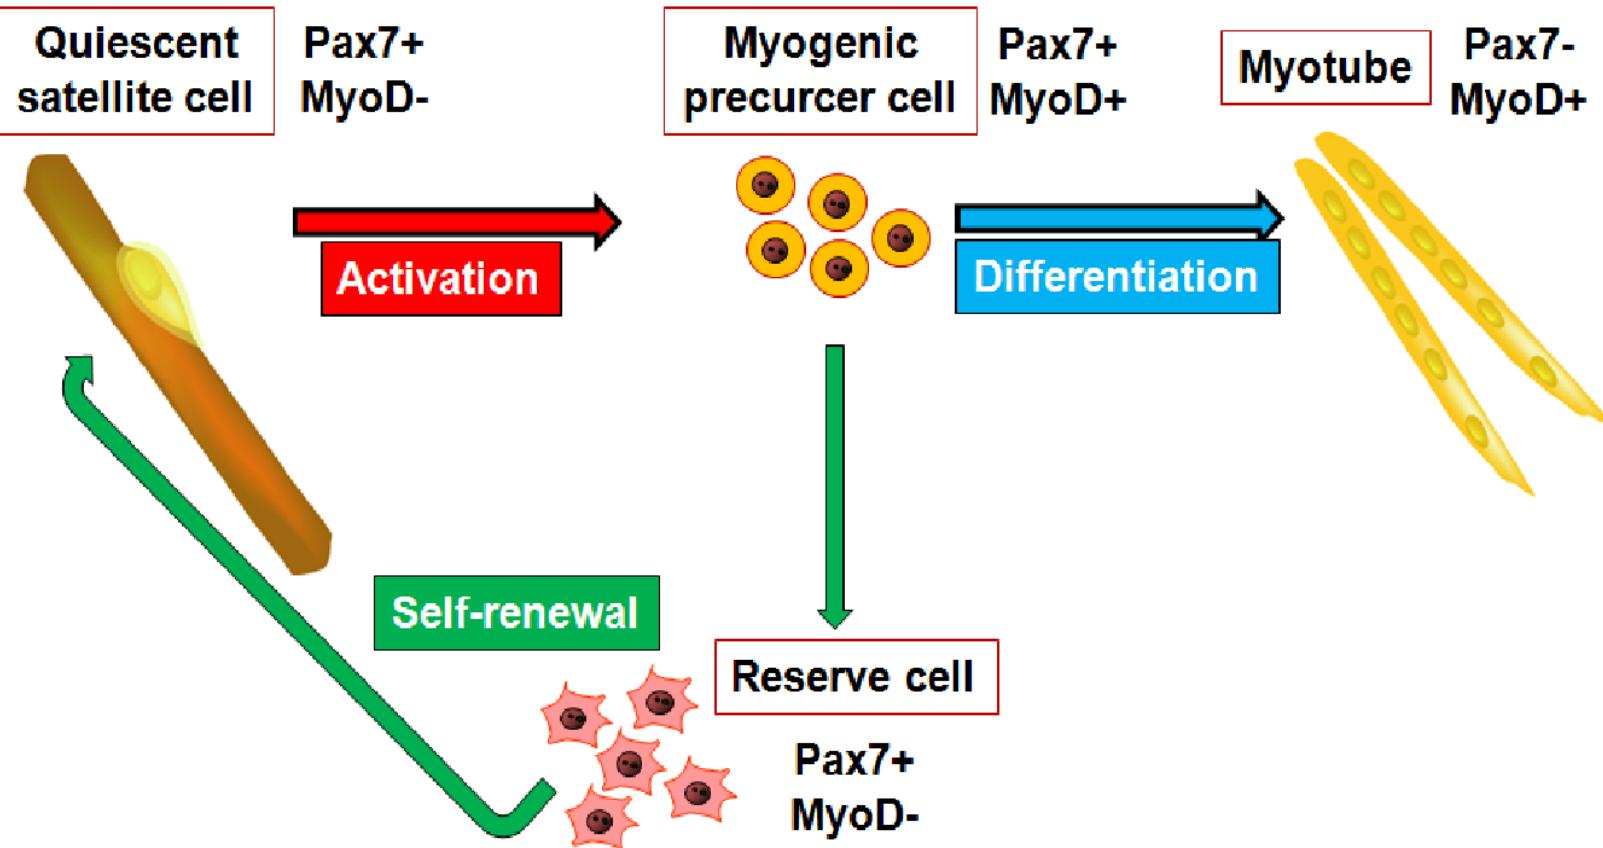

- **Positive Control**
-CD24 overexpression
- **Negative Control**

CD24 Expression

Myoblast Differentiation

Satellite cell activation, differentiation and self-renewal

Future Work

- What controls CD24 expression during differing stages of myogenic differentiation?
- Will *in vivo* modeling yield different results?
- Will different techniques of detection show different CD24 expression results?
- Are the differentiation steps between myogenic lineage steps distinct mechanisms?
