

Geometry Tools

In this course we will use three basic tools to help us with the geometry.

Protractor

- Protractor are used to measure angles. They usually come in a half circle or full circle shape to measure up to 180 or 360 degrees. For this class you only need the one as pictured below.

Ruler

- Rulers are used to measure a distance; however, in this course we will really only use a ruler to draw straight lines with.

Compass

- Many people think that a compass is only used to draw circles. This is not true and is one of the primary tools used in geometry and architecture.
