

# An Interactive Story

Log onto the *VLE – ICT – Y9 – 9.3 Programming* and download **The Cave Game** PowerPoint file

## Part 1

You have been asked by *Finite Ward* to help them with their next computer game project. They are trying to produce an interactive game / story and have produced the first few pages. They need you to hyperlink some of the slides together to make the game work.

Here is the plan they have made:

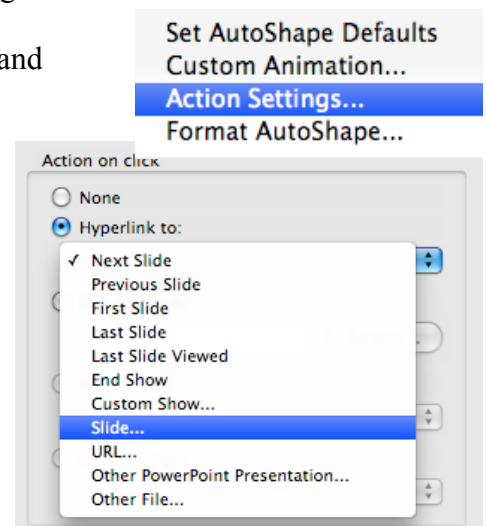

Your first job is to create the hyperlinks to link the slides together.

To do this, right click on the **edge** of one of the grey boxes and click **Action Settings**.

Then, under **Hyperlink**, choose **Slide...** and pick the correct slide.

Once you have finished all of the slides, run the slideshow and test that it works!

## **An Interactive Story**

### **Part 2**

Once you have completed the first part of the game, the company wants you to finish it off.

At each stage, there should be one option that keeps the game going and one option that will get the player killed.

Continue using hyperlinks to make the game work.

**Hint: You can copy and paste whole slides using the left side of the window – this will make it easier for you to set the story slides up.**

When you have finished, upload your finished work to the VLE.  
(ICT → Year 9 → 9.3 Programming → Very top of the course)

### **Part 3**

Over the next few lessons you will be creating some computer games! To get you started, try playing the Lightbot game in the first proper lesson in the course.

It starts off fairly easy – but gets hard quite quickly!
